Descripción

Anclado en la Tierra. El encanto de la arquitectura de hormigón contemporánea. ¿Quién no conoce el hormigón? Es esa fea sustancia con la que se construyen los puentes de las autopistas y las paredes, ¿no? Pues... sí y no. El hormigón es en realidad el nombre genérico que se aplica a una amplia gama de materiales de construcción y, adecuadamente usado, es uno de los elementos nobles de la arquitectura contemporánea, una especie de «piedra líquida», maleable y robusta que en manos de expertos permite la construcción de verdaderas maravillas de ingeniería. Los dos tomos de este libro resaltan lo mejor de lo mejor de cuanto se ha construido en hormigón durante los últimos años. En ellos aparecen «estrellas» como Herzog & de Meuron, Steven Holl y Zaha Hadid, pero también nuevos y sorprendentes arquitectos como los rusos Speech, profesionales en alza como Rudy Ricciotti (Francia) e incluso artistas como James Turrell, que ha convertido la famosa espiral de hormigón del neoyorquino centro Guggenheim (obra de Frank Lloyd Wright) en el escenario de una de sus piezas más destacadas.
